

Desktop Agent Troubleshooting Guide

This test document contains common troubleshooting steps for a desktop agent.

Network Connection Problems

If the desktop agent cannot connect to the server, first check the internet connection. Restart the network connection and verify that the required service is reachable.

ERR_BLOCKED_BY_CLIENT

ERR_BLOCKED_BY_CLIENT can occur when a browser extension blocks the desktop agent request. Check the browser extensions and temporarily disable ad-blocking extensions before testing again.

Health Check

Use the local health-check endpoint <http://127.0.0.1:39281/health> to verify whether the agent service is responding.

Troubleshooting Checklist

- Check the network connection.
- Check browser extensions and ad-blockers.
- Run the local health check.
- Review developer-console errors if the problem continues.
